

TRUSTWAVE MANAGED APPLICATION CONTROL

PROACTIVE, CUSTOMIZABLE, ADVANCED THREAT PROTECTION

Trustwave's MAC solution monitors and records all endpoint and server activity to prevent, detect and respond to cyber threats that evade traditional security defenses. Based upon flexible, policy-based application whitelisting technology, Trustwave has crafted a managed offering which gives you the freedom to outsource the day-to-day operations of administering the MAC solution within your enterprise, while retaining overall control of your corporate security policies.

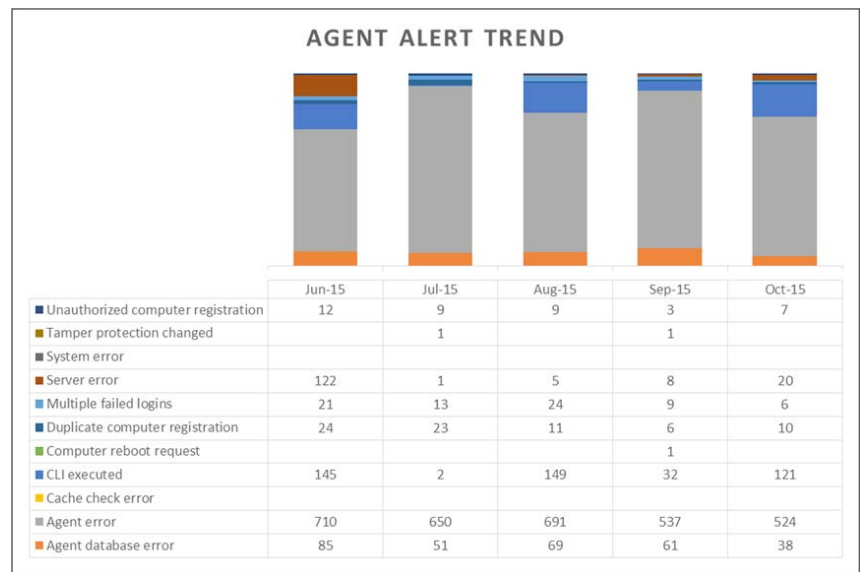

Leverage Trustwave's deep managed security experience along with the ultimate application whitelisting solution to rapidly heighten your security posture, while retaining control of your security policies and freeing your internal team to focus on other important security objectives. Trustwave has a wealth of experience and knowledge on best practices for administering the MAC solution to secure any organization on a global scale.

TRUSTWAVE MANAGED APPLICATION CONTROL

- Real-time Visibility & Control
 - Over every endpoint and server
 - No polling or network scans
- Signature-less Detection
 - With built-in advanced threat indicators
- Granular, policy-based control
 - Multiple server and desktop OS support
- Default Deny Policy
 - Trust based and policy driven application control
- Detect-and-Deny
 - Signature-less advanced threat indicators
- Detonate-and-Deny
 - Automatic detonation services

ADDITIONAL BENEFITS

- Address legacy OS concerns while meeting compliance needs within PCI or HIPAA
- Maintain best practices and ensure your policies and rules are optimally configured
- Infuse Trustwave's extensive security expertise into your organization
- Free your internal team to focus on other security objectives
- Actionable reports and intelligence across managed servers

Trustwave's MAC solution is the industry's most comprehensive endpoint threat protection solution leveraging advanced application control for both servers and desktops. Combining a trust-based and policy-driven approach to application control with real-time threat intelligence from Trustwave, our managed solution monitors and records all endpoint and server activity to prevent, detect and respond to cyber threats that evade traditional security defenses.
