

DATA SHEET

DbProtect Administrator

▶ TRAINING AND CERTIFICATION COURSE

For customers with DbProtect vulnerability assessment and/or rights management modules. Trustwave is committed to the success of its DbProtect customers. We are pleased to offer the Certified DbProtect Administrator (CDPA) training course, which is designed to provide you with the fundamental knowledge to configure and administer the DbProtect solution. The Certified DbProtect Administrator (CDPA) designation provides evidence of your ability to design, implement, and manage the DbProtect database security and compliance platform.

Approach

Our approach is learning by doing. Our expert trainers provide an intensive and hands-on learning environment as well as engaging business cases that will provide you with the right insights to accelerate business. All participants will access the Trustwave database security tools during the course to put newly gained knowledge into practice on the spot. There will be lots of opportunity to ask questions and exchange experiences with peer users and Trustwave's Subject Matter Experts.

After completing this course, participants will have a clear understanding of Trustwave's DbProtect platform, implementation methodology, and operational models.

Participants will learn to use DbProtect basic and advanced functionality, and install, configure, and deploy all components.

Participants will learn how to customize policies, rules, checks, filters, org structures, and leverage built in analytics and reporting capabilities. Participants will also learn how to review identified vulnerabilities and user privilege entitlements through analytics and reports.

Who Should Attend

Anyone who will be installing, configuring, or managing DbProtect to secure their databases and comply with regulatory or audit requirements. This would include:

- Security Administrators
- Security team members
- Database Administrators
- Anyone who will need to train others on the use of DbProtect

Participants should have experience with software implementation, information security best practices, and a working knowledge of databases. Since the training is hands-on, there is a maximum of 5 participants per session.

Subjects

- DbProtect Implementation
- Vulnerability Assessment Installation & Administration
- Rights Management
- Reporting & Analytics
- Advanced Troubleshooting

Duration

3 Days

Format

Instructor-Led Classroom

Prerequisites

Participants should have a working knowledge of Databases and Security. A basic understanding of their organization's requirements and compliance regulations will enable the student to maximize their learning.

Skills Gained

By the end of this course, participants should be able to perform the following tasks:

- Administer, configure and deploy DbProtect components
- Train others to use DbProtect

Results

Participants will take the exam after the course is completed. The hands-on, practical skills/knowledge exam covers all aspects of the material. The exam includes DbProtect screenshots and real-life exercises using DbProtect.

Attendees who successfully complete the exam at the end of the course will receive a Certified DbProtect Administrator certificate, and will be entitled to use the CDPA designation.

Locations

- CDPA Training courses are currently offered in:
