

## PRODUCT QUICK CARD

# Trustwave DbProtect Rights Management

### **Benefits**

- Gain control of your user privileges with DbProtect Rights Management.
- Identify users with inappropriate and undesired access to sensitive data
- Identify valid privileged users requiring ongoing monitoring
- Provide an accurate audit trail of how a user's rights were assigned

## Trustwave DbProtect Rights Management Module provides a detailed view of the assets and data your users can access and what actions they can perform on those resources. Capture audit trails to identify and how access was granted.

Trustwave DbProtect Rights Management automates a traditionally arduous but important best practice of sustaining a "least-privilege" strategy, where users can only access the data they need to perform their job. Rights Management has a variety of user access reports to help you establish a regular cadence of user entitlement reviews to:

- Analyze access with data owners
- Fix access to data after review
- Certify and authorize user rights

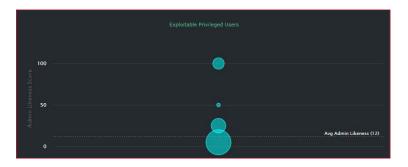

## How it Works

- Trustwave employs powerful scanners that dig deeply to understand the relationships of the users, applications and roles, all the objects that they have access rights to and how it was granted, so you can pinpoint user access issues and address them proactively.
- Trustwave DbProtect User Rights Exploration allows for you to start with a user or role and dig into the chain of privilege they have.
