CHICAGO ...

A covert team of cybercriminals was tasked with infiltrating a major retail empire on behalf of a large client.

**BULLSEYE**
SUPER STORE

They began their extensive research and dispatched a surveillance team to collect data.

An undetectable alert is sent to the **RED TEAM**.

The in-depth investigation led these villains to the weakest link in the organization: the lesser-known manufacturing arm of the retail giant.

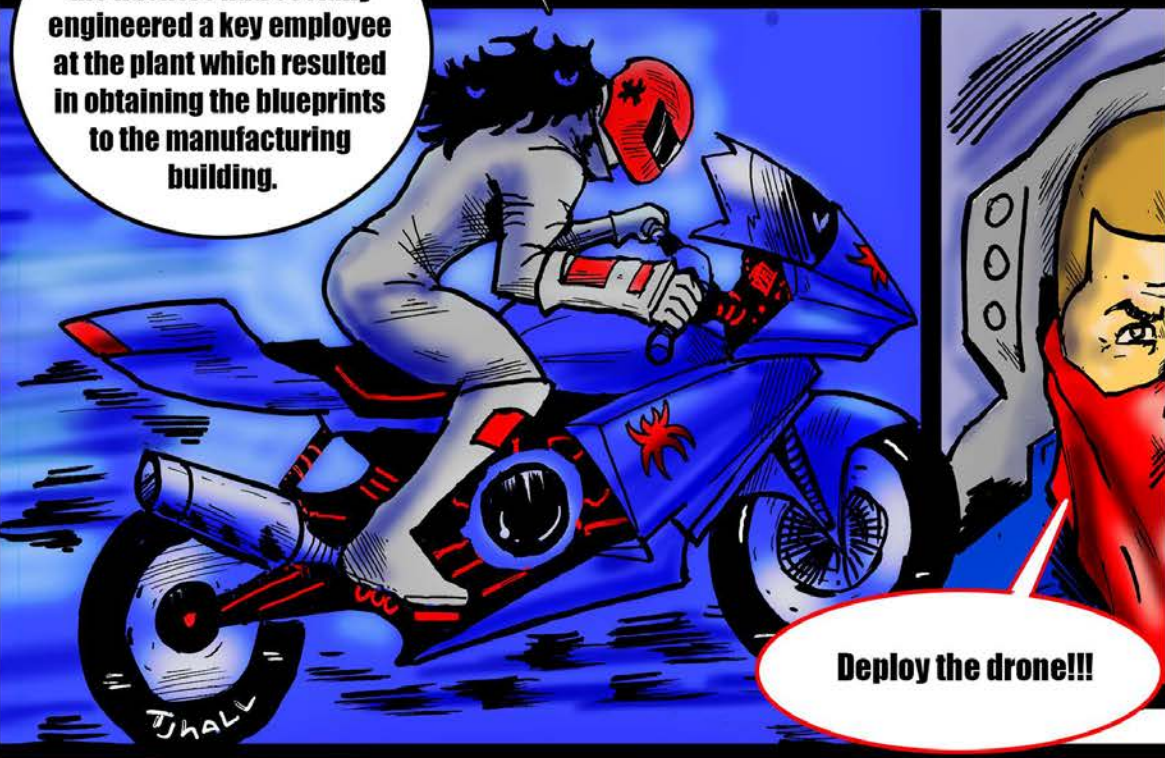

Time to get to work.

VR RRRRR

After just a few attempts, the hackers had socially engineered a key employee at the plant which resulted in obtaining the blueprints to the manufacturing building.

Deploy the drone!!!

The hackers immersed themselves in the company, monitoring every action ...

to gather intel about their computer systems,

schedules, and physical security,

and gain as many operational details as possible.

So, what vulnerabilities has your team found?

We aimed our high-powered antenna toward the front door, fired up our hacking laptop,

and set the trap.

From the shadows, a figure appears. He is a disgruntled employee who wants to help the team wreak havoc on the retailer that employs him.

We successfully captured the passwords for both the receptionist and the lead IT admin.

The informant never utters a word. He delivers his intel and drifts back into the shadows of the evening.

We have completed our reconnaissance. It is time to ready ourselves for what's next.

Why a doughnut?

The sugar helps me stay sharp.

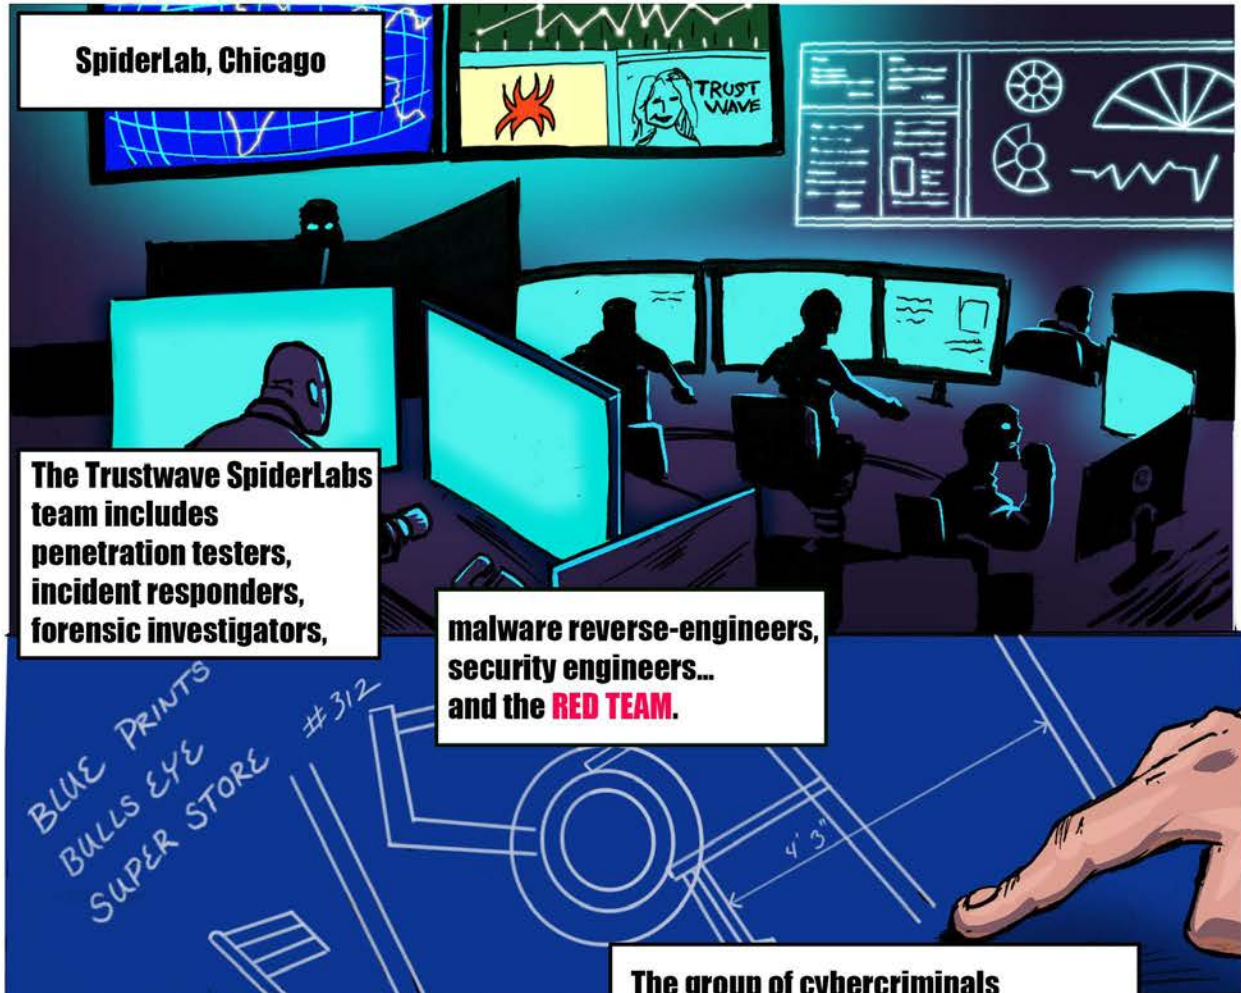

Ugh! I'd be bouncing off the walls!

It hasn't failed me yet!

Elsewhere,

The hackers who are unaware of the **RED TEAM'S** actions believe that their scheme is successfully proceeding unnoticed.

Cyberpunks like this group prey on the vulnerabilities of companies both big & small to access their most valuable data.

SpiderLab, Chicago

The Trustwave SpiderLabs team includes penetration testers, incident responders, forensic investigators,

malware reverse-engineers, security engineers... and the **RED TEAM**.

BLUE PRINTS
BULLS EYE
SUPER STORE #312

The group of cybercriminals analyzed all the intel they collected.

The information included vendor and customer lists, payment information, and pricing. They also had access to CAD drawings of the company's assembly lines as well as detailed operating procedure manuals.

Within hours, these bad actors had enough information to access the company's "secure" network.

They also pushed a trojan virus to a backup server that allowed them to circumvent the parent company's VPN, enabling them to by-pass the required MFA.

As they dove deeper into the network, the hackers continued finding more vulnerabilities to exploit.

They eventually penetrated the primary domain controller, which gave them free access to nearly every device—both locally and across the retailer's entire network.

They used this access to push ransomware to every system in the environment, including the assembly line equipment..

The Next Day. Trustwave SpiderLabs, Chicago.

The **RED TEAM** is preparing their presentation for the corporate board of directors and the retailer's IT group.

Are we ready?

We're always ready!

Together, the **RED TEAM** and the SpiderLabs team meet with their client .

The operation is complete and has been a success.

The **RED TEAM** of ethical hackers, posing as bad actors, uncovered all the vulnerable points in the retailer's organization.

The presentation clearly laid out all the findings, identifying their vulnerabilities and making recommendations on next steps.

You did the right thing by starting with Trustwave testing services. Now, our Managed Detection and Response Services will help you to shore up your defenses and remain secure and protected.

We're so thankful that the **RED TEAM's** ethical hackers identified...

our vulnerabilities before any malicious hackers were able to infiltrate our environment.

We're happy to help!

We look forward to implementing **MTDR** and your other recommendations. When can we start?

We can get started right away! We'll bring in other experts from the Trustwave organization to ensure you have a solution that is customized for your specific needs.

The **RED TEAM** and SpiderLabs team celebrate another successful operation and another day of keeping their clients safe.

When a cybercriminal targets a Trustwave customer, they don't stand a chance against the state-of-the-art technology, research, and people...

that stand together to combat cyberpunks and any nefarious threats.

THE END
...or is it?
