

"Trustwave's MSS provide tailored use cases, 24/7 global threat monitoring with curated threat intelligence and continuous tuning to optimize threat detection with customized monitoring and response capabilities addressing specific security needs."

Gowtham Sampath

Trustwave

Overview

Trustwave is a global cybersecurity pure-play organization, headquartered in the U.S. and operating as a wholly-owned entity under The MC² Security Fund, an affiliate of The Chertoff Group, an internationally recognized security and growth advisory and investment firm. Its portfolio focuses on providing MDR, MSS, database security and email security to organizations worldwide. With more than 1,000 world-class security professionals operating on behalf of clients across 96 countries, Trustwave helps organizations detect and respond to threats 24/7 in hybrid multicloud environments globally.

Strengths

Co-managed SOC (SIEM): Trustwave's co-managed SOC (SIEM) service reduces risk through continuous global threat monitoring, triage, investigations and response prioritization, helping organizations eradicate threats with speed and precision. The service is designed to suit the specific needs of small enterprises and augments security teams and operations, reducing alert noise and maximizing SIEM investment.

Managed SIEM: Trustwave's managed SIEM service is built on the Microsoft Sentinel platform and delivered by SIEM and SOC experts with experience deploying and managing SIEMs, building and operating SOC's, stopping alert fatigue and eliminating cyber threats.

Digital forensics and incident response (DFIR)

response (DFIR): Trustwave's DFIR consulting services enable organizations to confidently respond to security incidents. The service is backed by Trustwave SpiderLabs' decades of DFIR expertise and experience in responding to numerous data security incidents.

Expertise and experience: Trustwave's MSS are powered by the Trustwave Fusion platform, which connects to existing security tools with advanced analytics and Trustwave SpiderLabs' threat intelligence and expertise. Trustwave SpiderLabs threat hunters leverage a proprietary cyber threat hunting platform to look for suspected, hidden threats and malicious activity.

Caution

Trustwave should create more awareness and promote its industry-specific expertise and capabilities to tailor solutions for clients in specific sectors. Its thought leadership in addressing industry-specific cybersecurity challenges would immensely benefit midmarket enterprises.
