

## SERVICE DESCRIPTION

# Secure Development Training (SDT) – Hosted Portal

---

## Secure Development Training (SDT) – Hosted Portal

Trustwave's Security Education Portal allows organizations to deliver Trustwave's web-based security education courses to employees, providing tracking of trainee progress and real-time progress reporting. The portal will provide Client with the ability to:

- ❑ Track course progress and completion for each course participant.
- ❑ Generate reports on trainee progress on a module by module basis, including quiz results.
- ❑ Assign staff managers and administrators roles to help monitor and manage the security education program.

Trustwave's Security Education Portal is licensed to a number of individual participants per year. Each new participant consumes a license when their account is created. Licenses are counted annually so that accounts removed in a previous year do not count toward the following year's total.

Client may license a single course or a bundle of courses per learner (user) on an annual subscription basis. Access to a course or bundle is unlimited during the annual subscription period. Courses will be assigned to learners (users) at the time of service provisioning and enrollment.

## SDT - Course Catalog

Client may select one course from any of the courses in the SDT library, or client may select a bundle defined in the SDT library. Please refer to the *Security Education Catalogue* for the most current course and bundle offerings.
