Trustwave DLP Discover

SERVICE DESCRIPTION

Trustwave DLP Discover uses Trustwave's proprietary suite of detection and classification methods to investigate data at rest in order to help Client find and protect sensitive information residing in stored data. Discovery of sensitive data allows Client's security teams to focus their initiatives on specific users and systems, then implement the appropriate measures to meet regulatory requirements.

Key Benefits:

- Identify sensitive data on Client endpoints
- Identify sensitive data in the cloud
- Categorize data with precision to reduce false positives and reduce human intervention
- Reduce the risk of a breach by identifying and securing sensitive data in both Client's enterprise systems and the cloud
- Gain important visibility with robust reporting, including audit-ready, predefined compliance and trend reports

DLP Discover supports scanning for sensitive data on the network and in the cloud. Supported search targets include:

Cloud data repositories

- Office 365 online
- Google G Suite (email and drive)
- Microsoft SharePoint
- Microsoft Exchange
- Dropbox Business

Network file shares

- Server Message Block (SMB)
- Common Internet File System (CIFS)
- Any filesystem mounted in Windows Explorer

Endpoint files

- On-device local file and directory scans for faster scans with less burden on the network
- Password protected files
